

Design on the circuit of originality

40 years ago, after graduating from interior design university in Iran and working for companies in the wood industry, Ali Kavehei decided to run his own small business, Teka Kitchen Gallery, Despite facing challenges, Ali was determined to establish a company that was based on creative thinking and up-to-date technology.

Teka Kitchen Gallery has completed many successful and luxurious kitchen cabinet, renovation, and interior projects.

Teka Kitchen Gallery is a well known company in the GTA for providing excellent services to its clients through hard work, creative design, and the latest manufacturing technology.

TEMP PREFORMING

Preforming is a specific method of edge processing we offer at Teka Kitchen Gallery and done in our shop. In this method the surface material is formed and curved around the edge instead of just gluing an edge on the panel.

This method can be used on two opposite edges of a part of a material and provides the advantage of non-visible joint between the surface.

Through the specifically developed and patented Diamond Cut edge, it is possible to enhance the value of laminated panels such as, MDF, Clip boards and Plywood, in a simple and effective way.

This method can be applied for nearly every laminated surface, whereby there's big range of different decors and colors to choose.

We offer these two rare methods at our Gallery for those who have a unique taste in design.

TECHLINE

With our CNC electro mechanical machines, we are able to greatly expand the capabilities of a variety of materials such as Melamine, MDF, Plywood, Hard & Soft woods for the production of cabinet parts, frames, dovetailed drawers, mantles, three dimensional reliefs and virtually anything design related based on an accurate computer programming input system.

Our single-sided and double-sided edge banding machines are designed to process a wide range of materials with absolute precision and flexible production.

As a pioneer in edge banding technology, we offer effective solution for formatting and offering perfect edges for discerning wood of all sizes, providing first-class edge processing solution for a wide range of processes and materials with extreme accuracy and precison.

WHY TEKR?

- Direct Manufacturing
- Free Consultation
- Exact Delivery Time
- Free Design
- 100%Canadian
- Life Time Warranty
